

ENERGY PROCUREMENT

LEVERAGING DEEP ENERGY EXPERIENCE TO GENERATE SIGNIFICANT SAVINGS

Aramark can help clients reduce their energy spend by identifying the best fuels and best times to buy. **Energy is typically 20-30% of a facility's operation budget,** and is subject to increase in consumption (demand) as well as rates (supply). We help clients manage their supply-side risk.

The key to success in procuring energy and managing risk relies in understanding marketing data and analytics. Transparent access to suppliers and supplier costs provides the best deals and rates for energy within your facilities.

In 2006, Aramark developed a partnership with Amerex Energy Services to leverage their access to competitively priced energy suppliers in all deregulated markets, and the company's deep experience in procuring energy in the wholesale market. This partnership enables Aramark clients to explore energy procurement opportunities to obtain best in class electricity and natural gas rates.

Potential energy procurement engagements are evaluated to determine a client's goals and objectives, assess market risk, analyze consumption patterns, evaluate suppliers, consider product offerings, negotiate pricing, and facilitate contract execution. Timing in the energy procurement industry is crucial. Amerex emphasizes risk mitigation and cost certainty when advising clients. The analysis that identifies the potential savings by engaging Amerex comes at no cost to our clients. The overall process is quick, easy and simple.

THREE EASY STEPS TO ACHIEVE SAVINGS

DATA COLLECTION - Client shares historical energy data (bills) and current gas/electric agreements with Amerex.

ANALYSIS - Amerex compares the client's utility rates against the current market conditions, and other unique product solutions that can lower costs.

EXECUTE - Amerex will deliver a comprehensive savings analysis and draft a new procurement agreement for the client to review and execute if savings can be achieved.

Aramark and Amerex's collaboration over the years has generated more than \$50 million in savings to our clients.

ENERGY PROCUREMENT

SUCCESS STORIES

Baylor University, Waco, Texas

Enrollment: 14,000 full and part time students *Campus:* 7,377,390 GSF

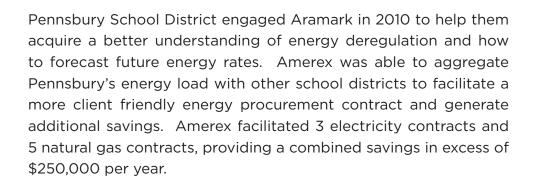

Aramark created a procurement contract that began in January of 2018, which generates \$4 million per year in savings for Baylor University through 2028. The total client savings will reach more than \$40 million over 10 years to create some of the lowest electric rates that the University has seen in nearly two decades.

Pennsbury School District, Fallsington, PA

Enrollment: 10,665 students

Amerex Managed Energy

Amerex has generated significant returns for the Education, Healthcare, Manufacturing, and Business & Industry Markets. They have managed energy procurement agreements with a total usage of more than:

4

17 Billion kWh from various energy products

22 million Deka-therms across multiple states
